

Centralise your data to your business advantage

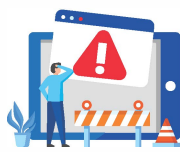

A simple, secure and scalable network configuration for your multi-branch business.

Synchronising data across a multi-branch organisation in real-time is a challenge. Typically, data are stored locally at each individual branch, restricting the management from making a holistic, informed decision. In addition, standard connectivity cannot cope with the complexity of current digital applications and security for a large number of branches.

The Multi-Branch Challenge

Siloed data across branches

Real time monitoring of network performance

High cost and expertise to manage network

Cloud and network security vulnerabilities

SD-WAN – The Right Network for Cloud and 5G

Software-defined wide area network (SD-WAN) is the future-ready, application-aware network that addresses the above challenges. With more organisations embracing the cloud, SD-WAN is the best network option that supports cloud-based applications and even 5G. It helps enterprises manage their connectivity better to gain competitive advantage.

Enterprises are planning to implement SD-WAN within the next 24 months.

New digital workloads being deployed on cloud-native platforms.

5G will quadruple wireless SD-WAN deployments to 20% of SD-WAN locations by 2023.

The Power of TM One SD-WAN

Business Continuity

Uninterrupted network with backup, predictive usage trends and proactive monitoring.

Increased Efficiency

Lower the cost and effort of managing networks with reduced physical space and multiple services in a single package.

Peace Of Mind

With 24x7 proactive monitoring by TM's Network Operation Centre (NOC) and managed connectivity-plus services, to achieve service level goals.

Nationwide Network

TM One's largest network and communications infrastructure for security, wide coverage, and direct access to large Cloud Service Providers (CSPs).

Assured Performance

Enhance application performance and user experience with high speed and uptime.

With TM One SD-WAN, your business can enjoy optimised cost, measurable performance and easy implementation. Optimise network services with software and hardware that's purpose-built for branch deployment. If you're looking to take your business into the next era of technology, check out what TM One SD-WAN can do for you.
