

Enriching Lives With Internet of Things (IoT)

People all across the world are becoming more connected. This tendency is now expanding to the premises, which can be monitored and controlled at any time and from any location. All types of premise-related systems and devices are now linked to the Internet and part of the fast-developing IoT, offering a high level of convenience, safety, and wellbeing.

The Challenges of Smart Premises

- Inability to view the daily energy consumption
- Not having full control of the smart devices from anywhere at any time
- Difficulty in managing the building maintenance
- Expensive connected devices
- Device from multi-vendor and different manufacturers
- Self-install device and software
- Manage devices over multiple apps

SOLUTION BRIEF

TM One Smart Premises

Convenience at home, workspace and patient suite using smart devices

We are moving towards the era of digital services, where innovations lead to a better lifestyle, security and tranquility through the use of smart devices with sensors, cameras, software and other technologies.

TM One Smart Premises uses smart devices that enable information and data to be collected and exchanged over the Internet to provide better analytics and predictions. It comes with an agnostic platform that can integrate and connect multiple devices from different manufacturers, brands and technologies to be managed over a single app. You no longer need to worry about setting up the devices on your own or updating their software every time. TM One Smart Premises is the right choice compared to many others in the market, as we promise you sustainable technology, business continuity and service satisfaction.

Smart Home, Smart Workspace, and Smart Patient Suite are the three services offered under this solution. The services are tailor-made to suit customer requirements and budgets.

The Benefits

TM One Smart Premises Attributes

TM One Smart Home
Provides home automation for homeowners or tenants. It allows home appliances, security devices, and electronic devices to be controlled over an app on a single platform. Secure the doors, turn on the lights and fans, or monitor the children from the indoor surveillance camera via the app. TM One Smart Home enables convenience and peace of mind for homeowners, tenants, and guests.

TM One Smart Workspace
Brings convenience to workspaces and offices using smart devices. The devices are connected to a centralised hub that allows turning on the lights, air conditioning and other devices via an app. The dashboard enables you to monitor and manage the energy consumption on a daily basis.

TM One Smart Patient Suite
Providing the convenience of digital experience to hospital management, administration and patients that will improve hospital business operations.
